

# ScanNTap™

## Instant, easy access to resource information with a QR scan

Use any device to scan a QR code and bring up drawings, documents, videos, and more, on-demand.

### Real-time access to equipment and facilities drawings, data, video, and procedures

Instant access to needed production and maintenance information with ScanNTap. Shoot a QR code to retrieve data in real-time, including, but not limited to, detailed specifications, assembly instructions, operations and maintenance manuals, Standard Operating Procedures, safety data sheets and even video on maintenance or production. Also tap into production workflows, perform quality control audits, and update operating and maintenance data.

### Conduct asset audits on the move

Asset checks can be conducted in the field. Use ScanNTap to view the maintenance history, fault reports and preventive maintenance checklists, building floor plans, equipment information, and other infrastructure documents in the ongoing maintenance of facilities and equipment.

### Enhance plant and substation maintenance and safety

Use ScanNTap to access maintenance checklists, O&M manuals, drawings and specifications, SOPs, and safety data sheets. Automate error reporting and log issues or updates from the plant or field. Easy access to markups and notations.

### Simplify worksite procedures

Use ScanNTap for rapid access to drawings, specifications, safety information, building codes, contractor certifications, and workflow assignments. Track attendance logs, project equipment and assets, and share project updates and instructions with a single tap.

# ScanNTap™

Generate customized QR codes instantly to tag equipment, facilities, or construction sites for quick resource identification and secure access to important documents and drawings, including O&M manuals, Standard Operations Procedures, safety data sheets, checklists, maintenance and operations videos, and collections of file sets. Also use ScanNTap to streamline data entry, action workflows and minimize paperwork, freeing up valuable time for your workforce.

- Generate customized QR codes to label components, equipment, facilities, piping, and workstations for rapid identification and access to important drawings and specifications, and procedures
- No need to go to an office to find needed documentation, checklists, and needed data
- Enhance quality control procedures with the ability to track quality checkpoints, update equipment inspections and maintenance documents, and capture test results on the spot
- Review equipment and assembly document sets, in real-time, including maintenance and operations videos
- Retrieve maintenance documents and safety data sheets that you are sure are up-to-date
- Scan QR code to access up-to-date maintenance records, routine and audit checklists, in real-time during asset audits and walk-throughs
- Quickly review workflow checklists and enter data or markup drawings/documents from the floor or at the site
- Quick access to compliance documentation for ISO organizations, for NIST audits, quality system testing, ITAR requirements and other supporting documents for in field training, certification and onboarding efforts
