eQuorum

Engineering Workflow & Document Management

✓ Automatically manage and distribute files and project documents for review, approval, and processing

✓ Use any device to scan the QR code on your resource and access drawings on-demand

✓ Create, track and control product and asset versions throughout the design and lifecycle process

✓ Keep audit trails, guarantee NIST, ITAR, NERC/CIP compliance, and secure essential files

Increase productivity and project efficiency, saving time

ImageSite offers the flexibility to complete projects efficiently without the need to search for files, verify their latest versions, distribute them to third parties, or organize updated documents. By managing digital documents, ImageSite enhances project efficiency and productivity, saving time and reducing the need for physical filing cabinet space.

Improves and increases document security and transparency

ImageSite provides enhanced security for managing files compared to local drives and network shares. They allow users to view and print documents without downloading them and providing links instead of sending actual files. For mobile devices, ImageSite encrypts offline files.

Fosters easy file access without needing software on the user device

ImageSite offers a centralized platform for information access, enabling users to easily find what they need, when they need it, across various repositories, devices, and document formats. With just a web browser, users can access all the features of a document management system from any location at any time. Built using HTML5, ImageSite requires no software installations on client computers and no mobile apps to maintain.

Enhances compliance

ImageSite offers robust server and storage solutions designed to meet some of the strictest regulatory requirements. It also provides enterprises with multi-level controls that determine which employees can access files, what actions each user can perform concerning those files, and detailed audit trails of all actions taken in the system.

Automate complex workflows and manage your documents with ease

ImageSite is an affordable and comprehensive browser-based document management system that serves as a central hub for organizing, storing, and managing versions of your most important documents, drawings, and other content. With advanced document distribution features, ImageSite enables you to collaborate more efficiently and securely. You can create schedule-driven, multi-step workflows to automate crucial business processes, ensuring timely document review and approval by automatically routing documents to the appropriate users. Authorized users can access essential documents and drawings on their tablets, smartphones, or PCs, guaranteeing files remain secure and are only available to individuals with the applicable permissions.

Mobile Data Management

Cloud-based engineering workflow and document management with commercial-grade security

- Search, view, and collaborate over drawings and documents while away from your desk, whether in the field, in other offices or at customer sites; in real-time (no syncing required)

- Mark-up drawings and documents on-the-go

- Download documents to take on-the-go, even if you're not connected to a network

- View CAD drawings without a CAD license

- Give vendors, contractors, and customers secure access to essential documents without network access

eSync=Site™

Synchronize corporate folders and files across multiple servers and locations

- Sync internal and external ImageSite servers for secure, efficient collaboration with vendors, customers and partners, including cloud versions

- Establish an archive or disaster recovery site (on-premise or in the cloud) that is automatically synced and maintained

- Allow multiple locations, departments, divisions and even users to maintain files locally while having global access to remote server documents
